

PRARAMBH 2026 · Closed pilot

A health check for the database that keeps your apps fast.

Explainable Redis / Valkey health — without opening it to the internet.

baltan.xyz

One founder. Full ownership.

Built the product. Talks to every customer. Owns every decision.

Kartikey Tandon

Founder & CEO · Solo co-founder · Equity 100%

What I do

Build the product, run demos, talk to startups & DevOps teams, and steer go-to-market.

Why me

Shipped Baltan end-to-end — monitor, dashboard, alerts — and already running real pilots.

Proof

100+ demos booked. Pilot interest from CARPL AI, BigOHealth, and DevOps practitioners.

After incubation support: hire sales + infrastructure help — keep product ownership with founder.

PROBLEM

Apps feel slow. Teams don't know why.

Most modern apps use a super-fast memory database (Redis / Valkey). When it gets sick, the whole product feels broken.

Memory fills up

Old data never expires. The database grows until the app crashes or slows down.

Hidden bottlenecks

One oversized piece of data can freeze everyone else — like one truck blocking a highway.

Alerts without answers

Tools say “database is slow” but not what to fix today.

Security says no

Many tools need the database opened to the internet. Security teams refuse.

Today's workarounds

Browse data manually · Watch generic graphs · Ask a senior engineer who “just knows”

Baltan is different: plain-English findings + a clear health score — and the database stays private.

Baltan = doctor for your fast database

We host a simple dashboard. You place a small safe monitor next to your database. Nothing private leaves.

1

Database stays private

Never opened to Baltan or the public internet.

2

Safe check-ups

Reads health signals only — never your customer data or passwords.

3

Clear answers

A score out of 100 + “what’s wrong” and “what to do next.”

Health score

See at a glance if things are healthy, okay, or urgent.

Plain-English findings

Missing expiry, oversized data, risky commands — explained simply.

Alerts on Slack

The team hears about problems early — not after customers complain.

One-click install

A single small monitor beside the database. Minutes, not weeks.

Others show graphs. We explain the problem.

Built for teams who care about privacy and need clear next steps.

	Do it yourself	Browse tools	Big monitoring tools	Baltan
Explains what's wrong	No	Rarely	Sometimes	Yes
Says what to fix next	Depends on expert	Explore yourself	Generic alerts	Yes
Keeps database private	Yes	Often local only	Varies	Always
Easy for a small team	Hard	Medium	Heavy & costly	Yes
Made for Redis / Valkey	No	Browse-focused	One of many	Yes

Strategy: win teams that refuse to expose their database — then become the trusted Redis health layer inside the company.

Start free. Grow into a paid cloud plan.

Who pays: engineering / DevOps teams. Early pricing kept simple for Indian startups & global pilots.

Who pays?

Companies that run apps on Redis / Valkey — startups to mid-size tech teams.

What they buy

A hosted health dashboard + alerts. They keep the small monitor on their side.

How we sell

Demo → free pilot → paid plan when they see value.

Revenue model

Monthly subscription (SaaS). Charge per database / team plan.

Proposed plans (to be finalized after pilots)

Free Pilot

₹0

Basic health + findings
Time-boxed · limited databases

Starter

₹2,999/mo
(~\$35)

Up to 3 databases
Slack alerts · core reports

Growth

₹7,999/mo
(~\$95)

Up to 10 databases
Longer history · digests

Scale

Custom

More databases
Onboarding · priority support

Every modern app needs a healthy fast database

Global need. India beachhead. Sell where trust and clarity matter.

Who we sell to

DevOps, platform, and product engineering teams — plus freelancers who manage many apps.

Where

Global product. Start with India (Delhi / NCR) for hands-on pilots, then remote US & Europe.

Willingness to pay

Strong interest already: CARPL AI, BigOHealth, DevOps individuals. 100+ demos. Not paid yet.

Near-term opportunity

Illustrative: hundreds of fit teams × a few databases × affordable monthly plans. Focus on Redis health first.

Working product. Early customers. Zero revenue.

Honest stage: closed pilot with real demos and design partners — monetization next.

STAGE: Early customers / Pilot

What exists today

- Live product website: baltan.xyz
- Safe monitor + hosted health dashboard
- Plain-English findings & health score
- Slack alerts · multi-database support
- Install in minutes for pilot teams

Validation so far

- 100+ demos booked
- Pilot interest: CARPL AI, BigOHealth
- DevOps individuals testing the idea
- Free basic pilot open
- No paying customers yet (by design)

Why we need support — and where it goes

Incubation support helps turn a working pilot into a reliable, paid product for more teams.

Product maturity

Harden the monitor and dashboard so pilots run smoothly for months, not days.

Trust & reliability

Stronger hosting, backups, and security basics so companies feel safe to depend on Baltan.

Reach customers

More demos, onboarding help, and early sales support to convert interest into paying teams.

Founder focus

Cover core operating needs so time stays on building and talking to customers — not side work.

Where funds will be used

- Product reliability & usability polish
- Cloud hosting & security basics
- Founder-led pilots, demos & onboarding
- Legal, compliance & day-to-day ops

What success looks like

- More active pilot teams running smoothly
- First paid conversions
- Pricing finalized from real usage
- Ready for the next growth stage
